

# FOAM-IN-PLACE

## Protective Packaging

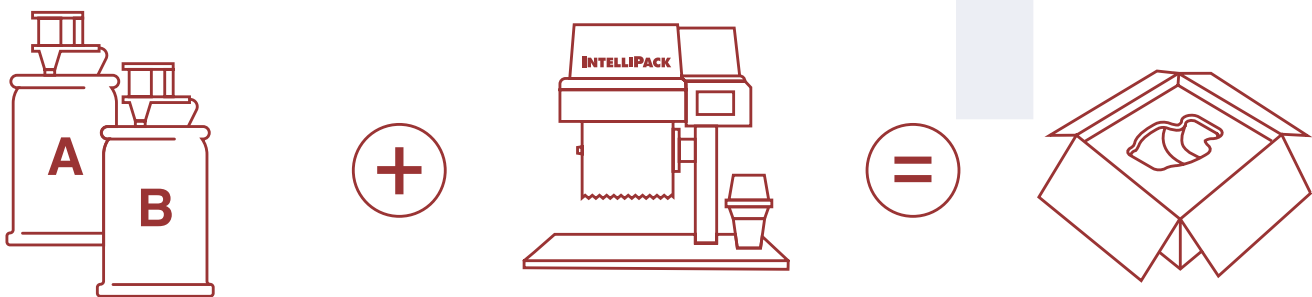

Benchmark Foam offers another superior packaging solution with Foam-In-Place (FIP) protective packaging. Ship with confidence that your product will arrive as expected when packaged with Foam-In-Place.

- **Reduce or eliminate damage costs**
- **Provides consistent cushioning and void fill in places that need it most**
- **Increase customer confidence**
- **Cost-effective packaging with little to no waste**
- **Minimal tooling costs**
- **Ideal solution for low-to-mid volume product**
- **Gentle surface contacts product**
- **Custom fitted to your product**

### How It Works:

Foam-In-Place polyurethane is molded by combining two liquid foams in high density polyethylene (HDPE) bags, film or prefabricated molds. The mixture expands rapidly around the product being protected, creating a custom protective shell.
